EQUELLA 6.4 QA2 release

Pearson has recently released EQUELLA 6.4 QA2. This release includes all the features and fixes that were provided in the 6.4 QA1 release plus additional issue fixes. We recommend upgrading your test environment to this version for testing prior to deployment in your production environment.

New features

The following enhancements have been added in this release to improve the user experience.

Integration

- EQUELLA now integrates with the Brightspace learning management system by D2L. Users can access EQUELLA and select content from within the Brightspace rich text editor, quick links, course builder and from the navigation menus. For more information see the [Brightspace Integration Guide](#) and the [Brightspace User Guide](#). (Please note: for 'Find Uses' functionality in EQUELLA your Brightspace instance will need a custom module installed by D2L)

Copyright

- Administrators can now enable a new option to restrict selection of activated EQUELLA content from within an LMS. When enabled, the option will only allow selection of content that has been activated under the same course the user is adding content to in the LMS. The new option is found under *Settings -> Copyright Settings*.
- With the option above enabled, users will only be able to push active content from EQUELLA to the course the content is activated against.

Resolved issues

The following issues have been resolved in this release since EQUELLA 6.4 QA1. This list contains issues that were reported by clients, and those found by our quality assurance team.

Contribution

- When a user uploaded a zip file and chose to attach the zip file, the zip file itself would appear as a blank line on the attachments control.

Resources

- After performing an action on a resource, if the user tried to use the browser's 'back' button the user would be presented with a browser message about re-submitting the page.

Copyright

- Users were able to add inactive content to the LMS by using the selection button on the search results page. The content added to the LMS was not viewable as it wasn't activated. Users can no longer select inactive content and must activate it before linking to it in the LMS.
- Contributors were not able to link to inactive copyright attachments when adding an EQUELLA Resource via the attachments control.

Known issues

- The Office to HTML conversion service is not compatible with 64-bit architecture based servers and should be disabled on these machines via settings in */path/to/equilla/learningedge-config/optional-config.properties*.
- Google Chrome and Safari running on Apple OS X do not allow users to drag and drop files onto the File Manager applet. The File Manager applet provides an action on the toolbar to select and upload files.

Supported environments

Supported environments information for EQUELLA 6.4 QA2 can be found at <https://neoconnect.pearson.com/docs/DOC-29368>
